2 ABSTRACT OF THE INVENTION

3

4 A competitive sport, and a facility for playing the same,
5 the facility having a raised planar playing field formed of a
6 plurality of rectangular trampoline-like channels held together
7 edgewise by supporting cables with all of the adjacent edges and
8 cables being covered by padding. The rectangular planar field is
9 preferably circumscribed by additional similar panels angled
10 upwardly and outwardly from the edges of the planar field with
11 goals being provided in each of the end angled panels. The
12 playing field may be divided and marked in predetermined ways
13 depending upon the rules of the game. In one form, the game may
14 involve two teams; one provided for each half of the field, with
15 each team taking turns for prescribed periods in attempting to
16 project a ball into a goal at the angled panels projecting
17 upwardly from the end of the opponents' side of the field, while
18 the defendant's attempt to thwart the defensive team's attempts
19 to make a goal. The total number of goals scored by each team
20 are totaled after the expiration of allowed play periods to
21 determine the winning team.
